

A framework setting out the places and processes needed to conduct collective reflections

Antoine Boudreau LeBlanc, PhD Candidate antoine.boudreau.leblanc@umontreal.ca

What is it? A socio-ethical analysis of a feasibility study for an antibiotic surveillance program in Quebec

Why ethics? A collective process of thinking proposed to strengthen the bridges between health, agriculture and ecology.

What is the problem? How do we connect people to policy, knowledge to decision-makers and data to researchers?

What is proposed? A framing problem! We must lead the way for complex and systemic thinking.
Three nested starting points (**person**, **institution** & **knowledge**) requiring three interdependent thinking processes on the governance of **data**, **change** and **facts**
